FRTek will participate in a lighting exhibition next month in Japan. We are planning to show various lighting products that can be controlled by Android application (example:high bay above picture).

FRTek will introduce home lightings which can be adjustable from 2,800K to 10,000K and change RGB color up to 256. In addition, multi sensor will be launched in the show. It has 4 type of sensor such as illumination, temperature, human body detection, and camera sensor.

Currently, FRTek provided lighting products to bank in Daegu and hotel in Jeju island. Mr.Nahm(CEO) mentioned system lighting needs a telecommunication technology. So, we are going to expand our lighting business for global market with integration with lighting and telecommunication technology.
